Welcome to the 29th Annual INCOSE International Symposium

Annually since 1991, the INCOSE International Symposium has a rich history of delivering high-quality content focused on the future of systems engineering.

INCOSE's Annual International Symposium is the largest worldwide annual gathering of people who do systems engineering for four days of presentations, case studies, workshops, tutorials, and panel discussions. The program attracts an international mix of professionals at all levels, and includes practitioners in government and industry, as well as educators and researchers. The benefits of attending the Symposium include the opportunity to share ideas, network, build competency, pursue certification, contribute to the advancement of the profession through collaboration on tools, processes, and methodologies, learn about new offerings in training and education, and forge new partnerships.

INCOSE Mission

Overview

The International Council on Systems Engineering (INCOSE) is a not-for-profit membership organization that promotes international collaboration in systems engineering practice, education and research.

Vision

A better world through a systems approach.

Mission

To address complex societal and technical challenges by enabling, promoting, and advancing systems engineering and systems approaches.

Strategic Objectives

Premier. INCOSE is the premier choice of systems engineers everywhere for their professional development needs.

Future. INCOSE leads the community in shaping the future of systems engineering.

Value. INCOSE delivers ever greater value to a growing and increasingly diverse membership.

50+
Working Groups

100+
Corporate Advisory
Board Members

**Vibrant Academic
Community**
Faculty, Curriculum, Research,
Student Divisions, Youth Outreach

Chapters
70+ Chapters in over 35 Countries

For additional information about INCOSE,
Please come to our INCOSE Village in the Exhibit Hall
or visit our website www.incose.org
or contact us at info@incose.org

INCOSE Values

1

Systems Thinking

Thinking and acting to apply systems approaches to address complex challenges and thus to realize successful sustainable solutions.

2

Pioneering and Innovation

Taking opportunities ourselves or with partners to evolve systems approaches to meet future challenges.

3

Learning and Development

Life-long learning with a changing world through education and continuing professional development, covering both technical and leadership competencies.

4

Respect, Diversity, Collaboration

Building and maintaining respectful relationships internally and externally in order to enable effective collaboration across the diverse community.

5

Individuals

The importance of people, their intellect and influencing skill, to support complex decisions and to deliver enduring change.

6

Volunteerism

Volunteers and staff working together to achieve our objectives and to deliver benefit to our members, individuals and society.

INCOSE Principles

Our values represent **who** we are. Our vision and mission represent **what** we are trying to achieve. Our principles represent **how** we pursue our vision / mission within the bounds of our values.

1

Impact

INCOSE assesses its impact based on the delivery of value to members and other stakeholders.

2

Partnership

INCOSE builds and disseminates products and services jointly with others to maximize our impact.

3

Holism

INCOSE emphasizes the whole over the individual parts in our creation of an integrated global technical network.

4

Differentiation

INCOSE recognizes the unique value of those who choose to affiliate with us, prioritizing direct affiliation and active participation over indirect or passive connection.

5

Volunteers

INCOSE is led by volunteers who set our fundamental direction.

INCOSE Certification

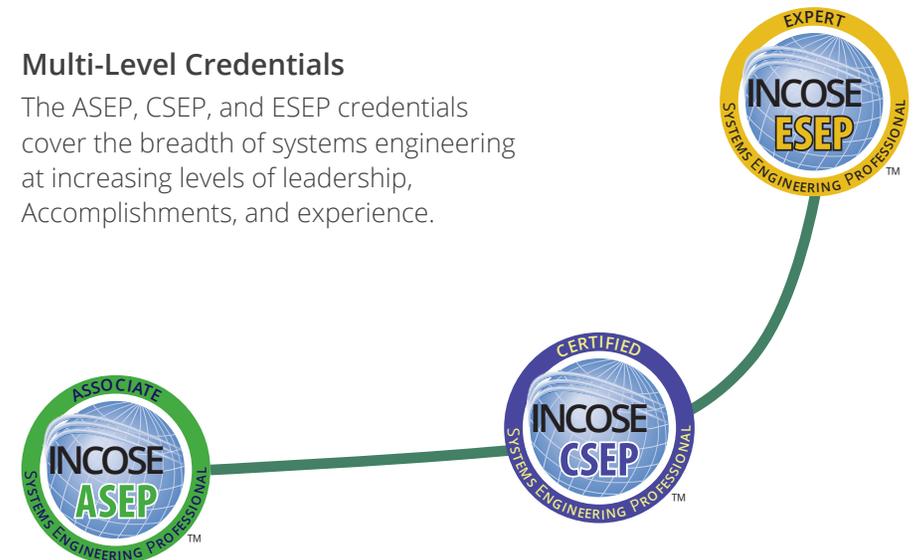

The International Council on Systems Engineering established a multi-level Certification Program to provide a formal method for recognizing the knowledge and experience of Systems Engineering Professionals (SEPs), regardless of where they may be in their career.

3000+
Certified

30+
Countries

Multi-Level Credentials

The ASEP, CSEP, and ESEP credentials cover the breadth of systems engineering at increasing levels of leadership, Accomplishments, and experience.

What is Certification?

Certification is a formal process whereby a community of knowledgeable, experienced, and skilled representatives of an organization, such as INCOSE, provides confirmation of an individual's competency (demonstrated knowledge, education, and experience) in a specified profession. Certification differs from licensing in that licenses are permissions granted by a government entity for a person to practice within its regulatory boundaries. Certification also differs from a "certificate" that documents the successful completion of a training or education program, in that it is not guaranteed simply by paying a fee, and certification must be maintained.

www.incose.org/certification

General Information

Meals

Continuing the long tradition of lunch in the Exhibit Hall, this year lunches, Monday - Thursday will consist of food items that you can easily eat while strolling through the Hall. Plan to enjoy this extra opportunity to learn more about symposium exhibitors and sponsors.

Tickets

Additional tickets can be purchased, at the registration desk for the following (subject to availability).

- Ice Breaker Reception for guests and day attendee
- Exhibitors' Reception for guests and day attendee
- INCOSE Island Night

eProceedings

Connect to the e-proceedings using Symposium URL:

www.is2019eproceedings.com

Enter the email address used to register to the Symposium and the confirmation number included in your confirmation e-mail. Then you can navigate through the program to download individual papers or all papers.

INCOSE Business Meetings

Working groups and other committees also meet during the symposium. The room assignments and information about these meetings can be found on the APP, and website, under Business Meetings. Announcements about additional meetings or room changes will be posted on the information boards. This is an opportunity to learn about or become more involved in the business of INCOSE.

Key Reserve Papers

All posters will be available to view all week in the **Portico area**. Papers for all key reserve papers can be found in the symposium proceedings.

INCOSE Village

Learn more about the services and products provided by INCOSE at the village. Meet members of the support team and discover ways to get more involved.

New Products

Be the first to get copies of the newest INCOSE products by visiting the village. As an added bonus - Meet the experts who developed those new products!

Upcoming Events

Learn more about upcoming events from the event organizers at the INCOSE Village.

Website

Do you have questions about the new website? Get your questions answered at the village.

Award Presentations

Best papers were selected by Technical Operations prior to the Symposium and are indicated in the program.

Monday Opening Plenary - July 22

Awards for Best Symposium Papers

Tuesday Plenary - July 23

- Pioneer Award
- INCOSE Fellows
- Founders Award
- Outstanding Service Awards
- Annual SE Journal Best Paper
- Annual INSIGHT Best Paper
- ISEF Prize
- INCOSE Foundation Stevens Doctoral Award for Promising Research in Systems Engineering and Integration
- INCOSE Foundation JHU Alexander Kossiakoff Award for Promising Applied Systems Engineering Research

Wednesday Plenary - July 24

- The Chapter Circle Awards
- The Director's Award for the Most Improved Chapter
- The President's Award for the Most Outstanding Chapter
- The Chapter Good Neighbor Awards

Social Events

Corporate Advisory Board Dinner (By invitation only)

Saturday, July 201900-2200
Cuba Libre
9101 International Dr, Pointe Orlando, Orlando, FL 32819

Welcome Lunch for New Members

Monday, July 221210-1330
La Coquina - Ground Level

New to INCOSE? Find out how to make the most of INCOSE and the symposium as you enjoy a buffet lunch. Take advantage of this special opportunity and have some fun as you make new connections across the systems engineering community. Learn from INCOSE leaders and seasoned systems practitioners who will share how INCOSE can help advance your career.

Ice Breaker Reception

Monday, July 221800 - 1930
Exhibit Hall, Regency hall - Ground Level

Recharge and reconnect at the annual Ice Breaker Reception! Enjoy beverages and canapés while you connect with new acquaintances and those you may see only occasionally during the year. This evening provides a chance to gather with your colleagues in a relaxed setting in our elegant Exhibit Hall.

Sponsored by

The Exhibitors' Reception

Tuesday, July 231700 - 1800
Exhibit Hall, Regency Hall - Ground Level

Mix business with pleasure as you meet exhibitors, chat with friends, and sample drinks with light snacks in an informal reception surrounded by the latest in technology, poster papers, and research.

Certification Reception

(ASEP, CSEP, ESEP only)
Tuesday, July 231800 - 1900
La Coquina - Ground Level

Empowering Women Networking Event

Wednesday, July 241715-1815
Trellises Lounge - 18th Floor

Members and Supporters of Empowering Women as Leaders in Systems Engineering (EWLSE), please join us at the Trellises Lounge on the 18th Floor for a one hour networking event. There will be light snacks, and one drink ticket per attendee including your guest, and a chance to network with INCOSE and EWLSE leaders. During the conference, keep a look out for those wearing an EWLSE button to find out more about.

INCOSE Island Night

Wednesday, July 24
Grand Cypress Ballroom - Ground Level
Doors open at2000
Music and dancing begin at2030

Join us for the INCOSE Island Night.

In lieu of a formal banquet this year, please join your INCOSE friends and colleagues for a night of Floridian fun. Enjoy live island music, dancing, tropical drinks, and Caribbean-inspired desserts.

Dress is resort casual (or whatever you are comfortable in).

Sponsored by

Networking Reception

Thursday, July 251530 - 1630
Portico Foyer - Ground Level

This event is the moment for the final networking, exchange of business cards, arrangements for the next meeting, or just a relaxing respite at the end of the symposium.

Invited Panels

Embarking on a Grand Challenge*Mon, 1000-1210*

Grand Cypress Ballroom GH - Ground Floor

Moderator(s):

Kerry Lunney (*Thales Group*)

Panellist(s):

Serge Landry (*Anacle Systems*)

Patrick Godfrey (*Systems Thinking*)

Michael Pennotti (*Stevens Institute of Technology*)

Hillary Sillitto

Abstract. Grand challenges (GCs) “represent the greatest obstacles to attaining universal well-being” (Ref: Wikiversity). They are “ambitious but achievable goals that harness science, technology and innovation to solve important national or global problems, and that have the potential to capture the public’s imagination” (Ref: White House). One such GC is Clean Water that everyone can relate to. Focusing on this one GC will enable INCOSE to participate at a global level on a complex systems problems that we can apply a systems approach, engage with a variety of stakeholder groups with a similar purpose and embark on a collaborative, learning journey. What better way can INCOSE demonstrate its vision of “a better world through a systems approach”.

This session will kick off with a presentation and discussion on possible heuristics principles for such complex problems and associated mental models/filters to be considered. This is the start of a cyclic learning journey that embraces “all industries and members with an interest in systems”. It should itself help us all in making sense of the complexity we face in our own industries and contexts.

With these principles in mind, an interactive phase will follow, focusing on the Grand Challenge, Clean Water. During this phase we will probe for ideas, concepts, exacting and balancing science, processes and practices with holism and passion. Information and material gathered in this session will contribute to our initiative in GCs and support our endeavours in advancing a systems approach to a GC, in particular Clean Water, collaborating with external teams on this complex problem. We invite all those who appreciate the need to join us in this journey. What is Systems Thinking and how do I do it?

AI in Systems Engineering*Thu, 1000-1210*

Grand Cypress Ballroom I - Ground Floor

Moderator(s):

Thomas Shortell (*Lockheed Martin*)

Panellist(s):

John Artus (*Lockheed Martin*)

Tom McDermott (*Stevens Institute*)

Abstract. As Artificial Intelligence and Autonomy change the world, Systems Engineering will change but the true question is whether AI/Autonomy is bringing doomsday to the world or will AI/Autonomy work and positively affect humans in the world? This session will debate the insertion of AI and Autonomy into Systems Engineering considering both systems of interest and how systems engineers use the the life cycle processes. The debaters will discuss many engineering, ethical, and legal questions of the use of AI and autonomy in SE including autonomous cars, defense systems, medical systems, and critical infrastructure and cyber security. The debate will include whether the current set of mindsets, methods, processes, and tools are equipped for the use of AI and autonomy in today’s world. The debaters will debate questions requested by the audience as time permits.

Invited Panels

FuSE, SE Transformation, and Digital Engineering*Thu, 1000-1210*

Grand Cypress Ballroom C - Ground Floor

Moderator(s):

Bill Miller (*Stevens Institute of Technology*)

Panellist(s):

Troy Peterson (*System Xi*)

Kevin Robinson (*Shoal Group*)

Heinz Stoewer (*Space Associates*)

Monica Nogueira (*SAE International*)

Abstract. Digital Engineering poses opportunities and challenges to be an enabler for Systems Engineering Transformation and the Future of Systems Engineering. As Digital Engineering matures, the opportunities and challenges are ...

- Systems community being able to determine what is needed for the Systems Engineers of the future to perform Digital Engineering
- Digital Engineering providing an adequate foundation for the Future of Systems Engineering
- Development, integration, and use of models adequately informing enterprise and program decision making; and embracing models as the basis of engineering
- Digital Engineering providing an enduring, authoritative source of truth; managing data as an asset
- Digital Engineering providing sufficient technological innovation to facilitate the transformation of the engineering practice
- Systems Engineering establishing a supporting infrastructure and environments to perform Digital Engineering activities, collaboration, and communication across stakeholders
- Limits of a “Digital Twin”
- Culture and workforce adopting and supporting Digital Engineering across the lifecycle
- Ability to manage the modeling environment (models, data, interfaces, etc.) in a changing, dynamic environment (change of models, systems and stakeholder interactions)

Panelists will provide perspectives on their uses and needs for Digital Engineering and their beliefs on whether it is sufficient to meet future needs. “Are we currently on a path to provide digital engineering for yesterday rather than for tomorrow?”

Invited Technical Operation Content

Grand Cypress Ballroom C - Ground Floor

The Systems Engineering Competency Framework*Mon, 1000-1040*
Cliff Whitcomb, Mimi Heisey

Abstract. In 2014, INCOSE leadership tasked the Competency Working Group to develop an INCOSE systems engineering competency framework (ISECF). The INCOSE Competency Framework was released as a technical product in July 2018. The ISECF can be used to produce competency models tailored to the needs of the customer organizations. The ISECF is not a competency model – it is meant to be used as a guide to the creation and development of competency models used by organizations. The ISECF was developed based on a number of existing competency models, including the INCOSE UK Systems Engineering Competency Model, the DoD Better Buying Power 3.0 Implementation Plan, the Defense Acquisition University Competency Model, the US Navy Systems Engineering Career Competency Model, the INCOSE Systems Engineering Handbook Fourth Edition, and the Systems Engineering Professional Certification Program. The ISECF is now being followed up by the development of a systems engineering assessment guide that is based on the ISECF. The assessment guide is to be used as a basis for organizations to develop assessment plans for systems engineers. This presentation will summarize the ISECF, explain the development of the companion assessment guide, and describe the way forward for future work in the competency area.

What makes a competent System of Systems engineer?*Mon, 1045-1125*
Alan Harding, Beth Wilson

Abstract. Systems of Systems (SoS) are now an established part of our systems engineering vocabulary - referring to that class of system where its elements have varying degrees of managerial or operational autonomy (Maier 1988). While a SoS is itself a system, it is recognised that this reduction in control over their development and operation requires different methods to realise and operate them, and to participate in them. In July 2019 INCOSE published its Systems Engineering Competency Framework. This framework, based on earlier work in UK, covers all of the competencies that are generally required across the discipline of systems engineering. The collected experience of the INCOSE SoSWG suggests that the activity of engineering/managing a system of systems, or of engineering/managing a system in a SoS context does require different competencies in the systems engineers who are involved. This presentation will explore three perspectives (typical SoS Engineering (SoSE) roles; what review of the SoSE pain points tells us about competencies for SoSE; and the insights we can gain from the maturing ISO standard ISO/IEC/IEEE DIS 21840 (guidelines for the utilization of ISO/IEC/IEEE 15288 in the context of System of Systems (SoS)). This presentation will summarise these three inputs, synthesise them into an overview view of competency for the application of systems engineering to SoS, and an indication of future work in the area.

Systems Engineering: Cracking the Code of Digital Transformation
.....*Mon, 1130-1210*
Troy Pedersen

Abstract. While complex systems transform the landscape, the Systems Engineering discipline is also experiencing a transformation to a model-based discipline. In alignment with this, the International Council on Systems Engineering (INCOSE) is seeking to strategically accelerate this transformation. The approach is to build a broad community that promotes and advances model-based methods

Invited Technical Operation Content

to manage unprecedented change, empower digital transformation and prepare companies for what's next to speed innovation. More specifically, to leverage the discipline of Systems Engineering and practice of model based systems engineering (MBSE) as the core capability to digitally transform for advantage.

From Apollo to the Space Shuttle and All Industries: The Trace-Elements of the Transformation of Systems Engineering*Mon, 1330-1410*
Dr. Larry Kennedy (*CEO Quality Management Institute, Co-Founder Systems Engineering Quality Management Working Group*)

Abstract. Fifty years ago, Apollo Astronauts first set foot on the lunar surface with the declaration that it was "one giant leap for mankind." It certainly was a leap forward in technologies as well as the public awareness of the prowess of systems engineering when it functioned in sync with the objectives of the mission. So, since then, what have we done, what have learned and what have we lost?

The quality of Systems Engineering has both improved and deteriorated even though the problems of development and deployment are relatively the same as always - people and processes that are supported by the tools of the discipline, etc. - all with the demand of satisfying a set of requirements described by a customer or customers. There have been triumphant announcements regarding the advancement of our ability to make outcomes more certain and our processes more measurable. And there has also been an increased emphasis on time to market, responsiveness and opportunism. But the statistics too-often do not support the promised results.

In this session, we'll discuss the "trace-elements" of the transformation of systems engineering culture over the past fifty years and the "lessons learned." We'll examine the efficacy of list-managing software, analytics and AI. And, we'll envision a promising future by building upon our competencies with carefully crafted "intelligent systems."

Smart Cities Panel*Mon, 1415-1455*
Ken Kapchar, Ken Crowder

PM-SE Integration Workshop.....*Mon, 1530-1655*
Tina Srivastava, Randy Iloff

Abstract. This is an interactive workshop to internalize some of the key principles arising from research into integrating the disciplines of program management and systems engineering to achieve improved program outcomes. Development effort is "different" than production. That difference arises any time "new" requirements must be added to the effort and creates a unique set of technical and management constraints. This powerful activity reveals the essential interaction between definition (SE) and execution (PM) of work, as well as providing insight into the unique nature of development effort. The workshop will also highlight key activities of the INCOSE-PMI Alliance and the PM-SE Integration Working Group.

SE Fundamentals Sessions

Poinciana - Ground Floor

Systems Engineering Complexity in ContextMon, 1000-1040

Sarah Sheard (*Carnegie Mellon University Software Engineering Institute*)

Abstract. Complexity is often blamed for systems engineering problems, but rarely with a precise definition of complexity. A paper cataloging complexity for the purpose of adjusting systems engineering cost estimates (Young, Farr, and Valerdi, 2010) identified more than 30 relevant types. Which of these types should systems engineers consider?

This talk defines complexity and identifies what entities within systems engineering problem spaces can be complex. It shows where in the system space these many varied types of complexity can arise. The presentation describes how a system being developed, the project developing the system, the environment, and cognitive challenges interact and can result in complexity.

The systems engineer should be able to recognize complexity, bring together various tools to identify and manage it, and measure the remaining risks to the project.

What is Systems Thinking and how do I do it?Mon, 1045-1125

Duncan Kemp (*UK Ministry of Defence*)

Abstract. This presentation will explain the fundamentals of Systems Thinking and how to apply it. Duncan will explain why Systems Thinking is critical to effective systems engineering. Using personal examples from Defence, Rail, Information Services and Business Transformation, he will introduce a series of simple yet powerful techniques. These will include: how to understand situations from multiple perspectives; how to understand the interactions between different elements; how basic systems concepts can be used to predict behaviour; and, the relationship between systems thinking, systems engineering, critical thinking and basic numeracy. Finally Duncan will help participants understand how to start their journey as System Thinkers.

Framing (and modeling) the Problem: Eliciting needs and deriving requirementsMon, 1130-1210

Alejandro Salado (*Virginia Tech*)

Abstract. Correctly framing the problem to be solved is a necessary condition to perform rational engineering. Without a proper formulation of the problem to be solved, success in engineering becomes a game of pure chance. Identifying preferences, eliciting needs, and deriving requirements are some vehicles by which systems engineers can unveil what the true problem or opportunity is. With such explicit framing of the problem, predictions on the success of the engineering endeavor using verification and validation become possible. Unfortunately, formulating engineering problems is arguably amongst the most difficult tasks in engineering. Yet, an engineer often completes his/her education without being formally exposed to these concepts. This introductory talk on problem formulation will cover fundamental concepts in problem formulation and problem modeling, will provide a few tricks to clearly distinguish between needs and requirements, as well as between verification and validation, and will point to methods that are effective in supporting the activities of need elicitation and requirement derivation.

SE Fundamentals Sessions

An Approach for Implementing MBSE in Aerospace Organizations.....Mon, 1330-1410

Chris Schreiber (*Lockheed Martin Space*)

Abstract. For the last 10+ years, Lockheed Martin Space has been pursuing the use of model-based techniques for use executing systems engineering process. Over that timeframe, we have collected a number of observations and learned a number of lessons that have shaped our approach to supporting the practice of model-based systems engineering (MBSE) across our enterprise. This presentation will take a look those observations and lessons, describe how they've impacted our approach to implementing across our organization, and have impacted our future directions for MBSE.

Introduction to Systems of SystemsMon, 1415-1455

Mike Ryan (*University of New South Wales*)

Abstract. This presentation will provide a brief introduction to the nature of system-of-systems (SoS), as distinct from the nature of systems-(of-elements). Based on the INCOSE SoS Primer and the final draft of ISO/IEC/IEEE 21839, the presentation provides definitions of SoS and of systems, and then goes on to explain the four main types of SoS: directed, acknowledged, collaborative, and virtual. The presentation makes some observations regarding the differences and similarities in design of SoS and design of systems. In particular, an appropriate design perspective (a systems-centric perspective) is shown to be useful in designing SoS.

Being Agile: Systems Engineering for Continuous Lifecycles. Mon, 1530-1610

Tom McDermott (*Stevens Institute of Technology*)

Abstract. "Continuous development and deployment" at the "speed of relevance" should be a core tenet of all systems today and the enterprises that acquire provide them. This presentation discusses the relationships between systems engineering, agile practices, and continuous lifecycles for development and operations (DevOps). "Traditional" systems engineering is often characterized as too slow and inefficient while many agile programs are said to fail due to lack of good systems engineering. How do traditional and agile system engineering practices converge? What do systems engineers need to know in the adoption of agile and DevOps practices? These questions are rooted in the foundations, history, and emergence of systems and software engineering as separate disciplines. We will explore this history and the paths to convergence necessary to make continuous development and deployment a natural aspect of systems engineering.

How to talk about SE without scaring people.....Mon, 1615-1655

Courtney Wright (*V1 Decisions*)

Abstract. Courtney Wright is INCOSE's Certification Program Manager, an instructor of SE professional development courses for non-engineers, and the recipient of many eye rolls from her teenaged children. All three audiences have heard her talk extensively about systems engineering, with varied levels of interest. She is not scary.

MBSE Lightning Round

Grand Cypress Ballroom C - Ground Floor

Building on last year's MBSE Lightning Round 1, leading MBSE practitioners and researchers will gather for fast-paced/TED-like presentations on a variety of Model-Based Systems Engineering topics--distilling MBSE lessons, critical implementation issues, and future directions into a series of 18 minute talks with in depth Q&A/discussions on the topics following the presentations.

Using System Architecture Models to Populate Structured Requirements....
.....*Tue, 1545-1605*

Ron Carson

Abstract. How good do you want your requirements to be when they are created? When they mature and are being verified? How can we ensure high-quality, verifiable requirements when they are first written? In this presentation we explain how to use a system architecture model to populate and analyze structured requirements templates so as to help ensure high-quality, verifiable requirements from the beginning. Elements of an architecture model are mapped to a requirements template. Then simulation and analysis of the model is used to validate the model and requirements. Using an industry requirements quality measurement model we show that this can enable higher quality and more valid requirements compared with not using the system architecture model.

Using the Viable System Model to Focus on the Human Aspects of Problems.....*Tue, 1605-1625*

Bob Kenley

Abstract. There once was a university course full of engineers who were assigned to teams and asked to develop system solutions for complex organizational problems that were chock full of human considerations. The earnest students had somewhat low empathy quotients and relatively high systemizing quotients. They and their project partners discovered to their amazement that there is a formal systems model that allows even the most geeky among us to uncover and appreciate the human context of an organizational situation before taking the deep dive to come up with system solutions.

MBSE—a Major Force for Enabling Digital Enterprises*Tue, 1625-1645*

Heinz Stoewer

Abstract. MBSE has advanced well beyond pilot projects, enabling new perspectives. These could involve the “integration” of all engineering disciplines and the simultaneous “correlation” with advanced PLM methodologies. Provided a holistic set of databases and a set of “end-to-end” seamless supporting tools can be realized these three elements together could become the backbone for digital enterprises of the future.

This presentation will outline options and hurdles for such a journey. It is in part based upon a panel discussion held at the January 2019 “Fourth MBSE Symposium and Workshop” at NASA JPL, Pasadena

MBSE Lightning Round

Enhancing the Value of Architecture Models*Tue, 1645-1705*

James Martin

Abstract. It is not uncommon to have spent considerable effort in creating a number of architecture models that end up spending most their time on the shelf. How can we ensure that this does not end up being the case? This talk will focus on how to do “problem framing” up front to identify the intended uses and users of the models, the questions that these models can help to answer, and the views that will help convey the answers that the models can provide to better understand the architectural trade space. This Problem Framing approach has been shown to greatly increase the value of architecture models and resulting in greater appreciation of the architecture being pursued.

Pratitioner's Challenge

Applying Digital Engineering, Architecture, and Modular Open Systems Approach (MOSA) to help solve a Mission Level Sociotechnical problem.

The 2019 International Symposium Project Team is pleased to announce the **4th Annual Practitioner's Challenge**. The purpose of the Challenge is to engage Symposium participants in a collaborative manner to demonstrate how systems engineering can be used to address and support solutions to global, sociotechnical issues. For the 2019 Practitioner's Challenge, the focus will be on the application of Digital Engineering, Architecture, and Modular Open Systems Approach (MOSA) methods to a major mission- level challenge.

What is the Practitioner's Challenge?

A well-attended part of the International Symposium (IS) that offers practitioners a practical problem to solve and to demonstrate their capabilities. This year's challenge provides participants an opportunity to explore an interesting problem in Digital Engineering, Architecture, and MOSA, and demonstrate the solutions to a wide audience.

Why should I participate?

The primary objectives for participants of the Practitioner's Challenge are:

- Let participants collaborate on a sociotechnical problem;
- Demonstrate the value of applying Digital Engineering, Architecture, and MOSA to a defined problem;
- Gain new insights into the applications of Digital Engineering, MOSA by interacting with a wide variety of systems engineers: new INCOSE members, members from defense, aerospace, and a range of other domains; and
- Create a series of artifacts that can be used by participants and INCOSE to demonstrate the value of important systems engineering approaches.

What Do I Need to Do?

- Register for the challenge when you register for the International Symposium.
- Attend a webinar prior to the conference on June 14th, 2019 to learn more about the challenge.
- Join fellow participants during a few sessions of the conference technical track (there is flexibility here).

For more information on the Practitioner's Challenge contact
Frank Salvatore (frank.salvatore@saic.com)

23 - BigLever Software www.biglever.com

Sponsor-exhibitor track: Tue 23, Jul 14:15-14:45 (Regency 6-Ground Level)

BigLever Software is the long-standing leader in Product Line Engineering (PLE). BigLever's onePLE solution delivers the leading-edge technology, methodology, business strategy and organizational change needed to establish a successful PLE practice. Some of the world's largest forward-thinking organizations are leveraging BigLever's PLE solution to engineer their competitive advantage through order-of-magnitude improvements in productivity, time-to-market, portfolio scalability, and quality.

13 - Capellawww.polarsys.org/capella/

Sponsor-exhibitor track: Tue 23, Jul 13:30-14:00 (Regency 6-Ground Level)

Capella is an Open Source Model-Based Systems Engineering workbench that helps engineers formalize systems specifications and master their architectural design. Sustainable and adaptable, Capella is a solution that has already been successfully deployed in a wide variety of industrial contexts (aerospace, communication, transportation, etc.).

31-32 - CATIA - No Magicwww.nomagic.com

Sponsor-exhibitor track: Tue 23, Jul 13:30-14:00 (Regency 5-Ground Level)

MagicDraw is the award-winning business process, architecture, software, and system modeling tool with teamwork support. Designed for Business Analysts, Software Analysts, Programmers, QA Engineers, and Documentation Writers, this dynamic and versatile development tool facilitates analysis and design of Object Oriented (OO) systems and databases. It provides the industry's best code engineering mechanism (with full round-trip support for Java, C++, C#, CL (MSIL) and CORBA IDL programming languages), as well as database schema modeling, DDL generation and reverses engineering facilities.

26 - ClearObjectwww.clearobject.com

Sponsor-exhibitor track: Tue 23, Jul 10:45-11:15 (Regency 5-Ground Level)

ClearObject is a digital transformation company highly specialized in IoT Engineering, Analytics and Connected Product Development. As a certified Google Cloud Partner and IBM business partner, we're experts at developing and implementing targeted data analytics strategies based on your company's unique needs. Additionally, we can deploy, migrate and manage serverless cloud solutions, including AI tools and end-to-end machine learning models, so you're free to focus on what matters most: getting value from your data.

16 - Institute for Process Excellence.....www.ipxhq.com

Sponsor-exhibitor track: Mon 22, Jul 13:30-14:00 (*Regency 6-Ground Level*)

For over 30 years we have helped organizations modernize and integrate their legacy processes, systems, people, and data. We provide industry leading training and services that establish a culture of excellence throughout your enterprise. Our global training sector is the premier worldwide educational resource for enterprise excellence and high-performance culture training with courses offered in seven languages. Our global services sector ensures our clients achieve operational excellence through the revolutionary True North Enterprise Calibration™ maturity model and services.

2 - InterCAX.....www.intercax.com

Sponsor-exhibitor track: Tue 23, Jul 10:00-10:30 (*Regency 6-Ground Level*)

InterCAX is a pioneer and trusted global innovator in the field of model-based systems engineering (MBSE). Our breadth of experience, market knowledge and technology solutions are unsurpassed in the industry. Our MBSE interoperability platform, Syndeia, is a software environment for integrated model-based systems engineering, connecting high-level architecture in SysML to PLM, CAD, databases and more.

17 - Jama Softwarewww.jamasoftware.com

Jama Software provides the leading platform for requirements, risk and test management. With Jama Connect and industry-focused services, teams building complex products, systems and software improve cycle times, increase quality, reduce rework and minimize effort proving compliance. Representing the forefront of modern development, Jama's growing customer base of more than 600 organizations includes SpaceX, Boston Scientific, Lyft, Deloitte, Alight, Samsung and Caterpillar.

22 - Maplesoftwww.maplembse.com

Sponsor-exhibitor track: Mon 22, Jul 10:45-11:15 (*Regency 6-Ground Level*)

Maplesoft is the leading provider of high-performance software tools for engineering, science, and mathematics. Maplesoft Engineering Solutions provide advanced tools and services for system simulation, calculation management, and systems engineering, helping organizations maximize the power of their engineering knowledge so they can complete their projects quickly and successfully. The Maplesoft product suite includes Maple™, for technical computing and calculation management, MapleSim™, the advanced system-level modeling and simulation tool, and MapleMBSE, which supports a model based systems engineering approach to requirements management.

8 - Method Park Software AG.....www.methodpark.de

Method Park at a Glance Method Park has been a specialist for software & system development in the safety and security-critical environment of medical devices and automotive technology since being founded in 2001. Method Park provides consultation services in the optimization of development processes and the fulfillment of industry-specific standards and legal regulations. Method Park supports its clients in specific development projects and offers seminars on current issues of software engineering. With "Stages", Method Park has developed a process management tool that facilitates definition, implementation and monitoring of development and business processes. Method Park has approximately 170 employees at locations in Erlangen, Frankfurt/Main, Hannover, Munich and Stuttgart, as well as in Detroit, Miami and Pittsburgh in the USA. Method Park (Group) posted operating revenue of 16,4 million euros in 2017.

9-10 - Northrop Grumman Corporationwww.northropgrumman.com

Northrop Grumman is a leading global security company providing innovative systems, products and solutions in autonomous systems, cyber, C4ISR, space, strike, and logistics and modernization to customers worldwide.

5 - Phoenix Integration.....www.phoenix-int.com

Sponsor-exhibitor track: Wed 24, Jul 10:00-10:30 (*Regency 5-Ground Level*)

Phoenix Integration's ModelCenter® is the environment for Model Based Engineering. ModelCenter® is a vendor-neutral software framework for creating and automating multi-tool workflows, optimizing product designs, and enabling Model Based Systems Engineering (MBSE). It is used by leading organizations worldwide to reduce development costs, improve engineering efficiency, stimulate innovation, and design more competitive products. Successful applications can be found in multiple industries, including aerospace, automotive, defense, electronics, energy, heavy industry, and shipbuilding.

21 - Project Management Institute.....www.pmi.org

Founded in 1969, PMI delivers value for more than 2.9 million professionals working in nearly every country in the world through global advocacy, collaboration, education and research.

4 - Project Performance Internationalwww.ppi-int.com

Sponsor-exhibitor track: Wed 24, Jul 10:45-11:15 (*Regency 6-Ground Level*)

Project Performance International (PPI) empowers engineers worldwide and improves the performance of their companies. This is made possible through insightful, experience-based training delivered by our world experts. PPI is the world's largest provider of systems engineering training, having run courses in 40 countries in almost every imaginable sector.

29 - pure-systemswww.pure-systems.com

Sponsor-exhibitor track: Mon 22, Jul 15:30-16:00 (*Regency 6-Ground Level*)

pure-systems provides Model-Based Product Line Systems Engineering, PLE and Variant Management solutions for Complex Systems and software. pure::variants integrates Requirements Engineering and MBSE tools like Capella, DOORS, DOORS Next Generation, Rhapsody, MagicDraw, Simulink, Polaron. pure::variants uniquely supports PLE Co-Evolution of Platforms and Variants, and integrates with IBM JAZZ Global Configuration Management.

15 - Raytheonjobs.raytheon.com

Sponsor-exhibitor track: Mon 22, Jul 10:45-11:15 (*Regency 6-Ground Level*)

Raytheon Company is a technology and innovation leader specializing in defense, civil government and cybersecurity solutions. Founded in 1922, Raytheon provides state-of-the-art electronics, mission systems integration, C5I™ products and services, sensing, effects and mission support services. Raytheon is headquartered in Waltham, Massachusetts.

Exhibitors

1 - Scaled Agilewww.scaledagile.com

Sponsor-exhibitor track: Mon 22, Jul 14:15-14:45 (*Regency 6-Ground Level*)

Scaled Agile, Inc., is the provider of SAFe®, the world's leading framework for enterprise agility. Through learning and certification, a global partner network, and a growing community of over 400,000+ trained professionals Scaled Agile helps enterprises improve business outcomes.

14 - Siemens PLM Softwarewww.siemens.com/plm

Siemens PLM Software is a bronze sponsor - please see the sponsors pages for more information.

7 - Sodus-Willertwww.sodius.com

Sodius is the global leader in enterprise integration technology and automation flow. Currently used in highly complex engineering environments, including aerospace, defense and automotive, our software solutions are proven, standards-based tools that allow faster time-to-market, lower product development costs, sharing and formal review, traceability, compliance, increased quality and higher profit.

12 - SPEC Innovations | Innoslatewww.innoslate.com

Sponsor-exhibitor track: Mon 22, Jul 10:00-10:30 (*Regency 6-Ground Level*)

SPEC Innovations' flagship software product, Innoslate, is the first web-based full lifecycle systems engineering tool. Innoslate provides an all in one solution to perform requirements management, process modeling, simulation, testing, and more. Innoslate supports the entire product lifecycle from cradle to grave. This cloud or on-premise application simplifies product development while reducing time-to-market, cost, and risk. Implement model-based systems engineering on any device anywhere with Innoslate's easy user interface. Visit innoslate.com to learn more or sign up for a free trial.

25 - THE REUSE COMPANYwww.reusecompany.com

Sponsor-exhibitor track: Tue 23, Jul 15:30-16:00 (*Regency 6-Ground Level*)

The REUSE Company is an organization specialized in the application of Semantic Representation and Analysis Technologies to a wide range of industries (Aerospace, Defense, Automotive, Naval, Health, Industrial machinery...). Our customers are usually (but not limited to) safety oriented organizations. Our main focus is on System/Software Reuse, Traceability and Quality applied to all types of work-products throughout the whole SE lifecycle (requirements, SysML Models, physical models, tests cases, data results, manuals, natural language descriptions, fault trees,etc). The integration of tools and technology from The REUSE Company facilitates the representation, analysis and exploitation of knowledge allowing for a knowledge-centric systems engineering approach. Our mission is to promote system/software and knowledge reuse within any organization, by offering processes, methods, tools and services that make it possible. We offer technology that is fully integrated within the organization's production chain.

20 - Tom Sawyer Softwarewww.tomsawyer.com

Sponsor-exhibitor track: Wed 24, Jul 13:30-14:00 (*Regency 6-Ground Level*)

Tom Sawyer Software is the leading provider of graph and data visualization software for Systems Engineering. Our MBSE solution, built with Tom Sawyer Perspectives, transforms diagram creation, navigation, and customization into an automated process with interactive web-based and desktop views.

Exhibitors

18 - TUS Solution LLCtussolution.mn/en/

Sponsor-exhibitor track: Wed 24, Jul 15:30-16:00 (*Regency 6-Ground Level*)

TUS Solution LLC offers management consulting and digitalization services with an aim to fix system deficiencies in organization by transforming it into a healthy system that is capable of generating quality data. TUS Solution was founded in 2016 by Gund Investment LLC. While TUS Solution LLC may be relatively young, it is already providing services to leading companies and promising SME's of Mongolia.

3 - Vitech Corporationwww.vitechcorp.com

Sponsor-exhibitor track: Wed 24, Jul 10:00-10:30 (*Regency 6-Ground Level*)

Vitech provides systems engineering solutions to help solve the world's complex problems. GENESYS and CORE, its flagship model-based systems engineering tools, guarantee completeness and consistency to help engineering teams achieve desired solutions that cost less, save time, reduce risk, and avoid waste.

19 - Wileywww.wiley.com

Wiley, a global company, helps people and organizations develop the skills and knowledge they need to succeed. Our online scientific, technical, medical, and scholarly journals, combined with our digital learning, assessment and certification solutions help universities, societies, businesses, governments, and individuals increase the academic and professional impact of their work.

Academic

A10 - FAMU-FSU College of Engineering.....www.eng.famu.fsu.edu

Sponsor-exhibitor track: Wed 24, Jul 13:30-14:00 (*Regency 5-Ground Level*)

The most diverse college of engineering and the only joint college in the nation! We bring innovative solutions to real-world challenges with world-class researchers and a vibrant student community. The FAMU-FSU College of Engineering offers graduate programs in biomedical, chemical, civil, electrical, industrial and mechanical engineering. These programs are offered at the master's non-thesis, master's thesis and doctoral level in each discipline. We also offer a M.S. non-thesis in systems engineering (industrial), M.S. non-thesis in engineering management (industrial) and M.S. thesis in sustainable energy (mechanical).

A3 - Georgia Tech Research Institutegtri.gatech.edu

Georgia Tech Research Institute (GTRI) develops advanced technological solutions and large-scale system prototypes to address the most difficult problems in national security, economic development and overall human betterment. Core research areas include complex and agile systems engineering, sensor design and integration, information management and cyber security, and defense technology development.

A5 - Johns Hopkins University, Whiting School of Engineering.....ep.jhu.edu

Johns Hopkins University's Whiting School of Engineering offers 20 online/part-time Masters programs. Our expert instructors impart cutting-edge knowledge and skills in collaborative, interactive learning environments. Programs include: Systems Engineering, Healthcare Systems Engineering, Information Systems Engineering, Space Systems Engineering, and Engineering Management.

A7 - Missouri S&Tglobal.mst.edu

Sponsor-exhibitor track: Tue 23, Jul 10:00-10:30 (*Regency 5-Ground Level*)

Missouri S&T is an active leader in systems engineering and architecting education, research and professional activities. It is the only university to have four Stevens Doctoral Award recipients. Through its distance programs, S&T meets the needs of working professionals and has one of the top distance graduate engineering programs in the nation.

A8 - Polytechnic University of Puerto Rico.....www.pupr.edu

Preliminary

Technical Program

3 Days, 3 Tracks, 4 Keynotes,
40+ Presentations, Panels, and More!

40 Papers & Posters on Human
Systems Integration
Wednesday - Friday

4 Inspiring Keynote Speakers

Guy André Boy CentraleSupélec and ESTIA Institute of Technology, Chair of INCOSE HSI WG
Mica Endsley Former US Air Force Chief Scientist, President of SA Technologies
General Frédéric Parisot French Air Force State Staff
David Sirkin Stanford University

14 Countries Represented in Papers
Australia - Austria - Belgium - Canada - France - Germany
Hong Kong - India - Israel - Norway - Romania - Slovenia
United Kingdom - United States

18 Application Domains
Top Domains
Adaptive Systems, Aeronautics, Automotive, Air Traffic Management, C2, Defense,
Healthcare, Manufacturing, Maritime, Medicine, Nuclear, Oil & Gas,
Public Safety & Security, Social Media, Space, Tangibility, Training, UAV

19 Topics Represented
Top Topics
Agile Development, Artificial Intelligence, Certification, Cognitive Engineering, Complexity
Analysis, Decision Making, Design Thinking, Digital Human Modeling, Human Centered
Design, HCI, Human Factors & Ergonomics, Human Machine Teaming, Machine Learning,
MBSE, Modeling & Simulation, Organization Design & Management, Performance
Monitoring, Situation Awareness, Systems of Systems

3 Panels
With Global Leaders in Human Systems Integration
- Technological and Organizational Situation Awareness for Public Security & Safety
- Do We Need to Develop a New Discipline of Human Systems Integration?
- HSI Implications of Adaptive Human-Machine Teaming

30th Annual **INCOSE**
international symposium

Cape Town, South Africa
July 18 - 23, 2020

A dream come true.....
the INCOSE SA Chapter invites you
to plan for participationand a vacation!

CAPE TOWN
SOUTH AFRICA
an inspiring place to meet

Mark your calendar now!
July 18 - 23, 2020

SPONSOR INCOSE IS 2020!

- 1** Unique brand of recognition and visibility for your organization
- 2** Access to the latest thinking relevant to the practice of Systems Engineering
- 3** Put a spotlight on your organization's competency in Systems Engineering
- 4** Be associated with the highest culture of professionalism and innovation
- 5** Demonstrate organizational support to INCOSE's mission
- 6** Develop sustainable business relationships

EXHIBIT at the INCOSE IS 2020!

- Be associated with the highest culture of professionalism and innovation
- Access to the latest thinking relevant to the practice of Systems Engineering
- Put a spotlight on your organization's competency in Systems Engineering
- Develop sustainable business relationships

2019 INCOSE Leadership

President

Garry Roedler, *Lockheed Martin Corporation*

President Elect (President in 2020)

Kerry Lunney, *Thales Australia*

Secretary

Kayla Marshall, *Lockheed Martin Corporation*

Treasurer

René Oosthuizen, *Monzé Consultants*

Technical Director

David Endler, *SE Consultant*

Technical Services Director

Don Gelosh, *WPI*

Director for Outreach

Mitchell Kerman, *Idaho National Laboratory*

Director for Academic Matters

Ariela Sofer, *George Mason University*

Chief Information Officer (CIO)

Bill Chown, *Mentor Graphics*

Director for Marketing and Communications

Lisa Hoverman, *HSMC Group*

Director for Strategic Integration

Art Pyster, *George Mason University*

Corporate Advisory Board Chair

Zane Scott, *Vitech Corporation*

Director, Americas Sector

Tony Williams, *Jacobs Engineering*

Director, Asia-Oceania Sector

Serge Landry, *Anacle*

Director, EMEA Sector

Paul Schreinemakers, *How2SE*

Deputy Technical Director (*)

Gretchen Peacock, *Lockheed Martin Corporation*

Corporate Advisory Board Co-Chair (*)

Don York, *Engility*

Chief of Staff (COS) (*)

Andy Pickard, *Rolls Royce Corporation*

(*) non voting position

Past presidents

Alan Harding	2016-2017	Donna H. Rhodes	2000
David Long	2014-2015	Kenneth Ptack	1999
John Thomas	2012-2013	William Schoening	1998
Samantha Robitaille	2010-2011	Eric Honour	1997
Pat Hale	2008-2009	Ginny Lentz	1996
Paul Robitaille	2006-2007	James Brill	1995
Heinz Stoewer	2004-2005	George Friedman	1994
John Snoderly	2002-2003	Brian Mar	1993
John Clouet	2001	Jerome Lake	1992

IS2019 Team

Technical Program

John Wilcox, *Northrop Grumman Corporation*

Plenary and Keynote Sessions

Nicole Hutchison, *Stevens Institute of Technology*

Technical Operations Liaison

Eric Belle, *SpaceX*

Master of Ceremonies

Ricardo Valerdi, *University of Arizona*

Marketing & Communications

Rachel LeBlanc, *Worcester Polytechnic Institute*

Local Chapter liaisons

Michael Goodman, *Space Cost Chapter*

Macaulay Osaisai, *Orlando Chapter*

Ed Smith, *Orlando Chapter*

New Member Functions

Donna Long, *Vitech Corporation*

Practitioner's Challenge Chair

Frank Salvatore, *SAIC*

international symposium

Cape Town, South Africa
July 18 - 23, 2020

Submission date for papers, tutorials and panels:
8th November 2019

Future events

September
2019

HSI 2019 - Human Systems Integration

September 11-13, 2019
Biarritz, France

Western States Regional Conference

September 13-15, 2019
Los Angeles, CA, USA

October
2019

EMEA Workshop 2019

October 10-11, 2019
Utrecht, Netherlands

AOSEC 2019

October 17-18, 2019
Bangalore/Pune, India

Great Lakes Regional Conference

October 21-25, 2019
Cleveland, OH, USA

November
2019

The Annual Systems Engineering Conference 2019

November 19-20, 2019
Leeds, UK

January
2020

Annual INCOSE International Workshop 2020

January 25-28, 2020
Torrance, CA, USA

January
2021

Annual INCOSE International Workshop 2021

January 29-31, 2021
Seville, Spain

July
2021

Annual INCOSE International Symposium 2021

July 17-22, 2021
Honolulu, HI, USA
